## Tim Sutcliffe Industrious

Art Ref: 059

**About this Bee:** This Bee is inspired by Manchester's most famous period in history, the Industrial Revolution. In keeping with his functional character, the worker Bee is transformed into a mechanical steam bee comprised of pistons, gears, gauges and valves. His well oiled cogs are encased in panels of painted metal and brass to give him the classic bee colouring whilst retaining the look of a 19th century industrial engine.

**Bee designed in the UK**
